EXPERIENCE

SDE Intern at Omniful

Jun 2025 - May 2026

Tech : Go, Kafka, AWS(SQS, S3, CloudWatch, AppConfig), Redis, PostgreSQL, NewRelic,

- Optimized inventory upload worker by refactoring data structures and processing pipeline: replaced 4D/5D in-memory maps with lightweight in-memory cache layer, implemented configurable batch processing via AWS AppConfig, added cursor-based pagination, and enforced transactional writes. Reduced processing time by 50% and eliminated OOM issues.
- Optimized 20+ APIs by eliminating full table scans, implementing strategic indexes (B-tree and partial), and refactoring complex joins with CTEs and materialized CTEs. Reduced query execution time by 35-40% and database load by 30%, improving overall platform performance and scalability.
- Implemented hub and seller-level access control system governing 360+ APIs across WMS and tenant service. Enforced rule-based authorization with frontend coordination and AWS AppConfig-driven feature flags for parallel development and zero-downtime rollouts.
- Refactored roles and permissions module with 10 new v2 APIs supporting pricing plan and feature-based scoping across 12 microservices. Enforced RBAC in user and role management flows end-to-end.
- Debugged and resolved production issues using New Relic and CloudWatch for observability. Identified root causes of system failures, fixed data inconsistencies, and deployed hotfixes with minimal customer impact.

PROJECTS

Foodie Fiesta

Feb 2025 – April 2025

Tech: Dialogflow, FastAPI, React, MySQL, Docker, GitHub Actions

- Built Chat-à-la-Carte, a Dialogflow-based chatbot to assist users in ordering food from Foodie Fiesta.
- Integrated the chatbot with a FastAPI backend and MySQL database, managing user queries for menu items and restaurant services.
- Embedded the chatbot interface into the React website via an iframe for seamless user interaction.
- Containerized the application using Docker, deployed it to production, and implemented CI/CD pipelines via GitHub Actions.
- Future plans include enhancing chatbot responses, integrating order tracking, and expanding menu options.

(Purpose: Provide an AI-powered chatbot for an enhanced restaurant ordering experience.)

Custom STL

Tech: C++

July 2024 – Oct 2024

- Developed a custom implementation of the Standard Template Library (STL) in C++, featuring a wide range of data structures.
- Enhanced the standard functionalities by adding custom methods for sorting, finding max and min elements, and rotating arrays or lists.
- Implemented advanced algorithms such as Breadth-First Search (BFS) and Depth-First Search (DFS) for graph traversal.
- Designed the project for ease of use, allowing integration into any C++ program by simply including header files and utilizing custom classes.
- Future work includes expanding functionality with complex algorithms, optimizing performance, and adding parallel processing capabilities.

(Purpose: Provide a customizable, efficient alternative to STL with extended features for common data structures.)

SKILLS

Programming Languages:

Go, C++, Python

Tools:

New Relic, Kafka, AWS(SQS, CloudWatch, AppConfig), Git, GitHub, Docker

Databases:

PostgreSQL, MySQL, Redis

Soft Skills:

Problem-solving, Time Management, Adaptability, Leadership, Teamwork, Critical Thinking

EDUCATION

Lovely Professional University, Jalandhar, Punjab

B.Tech CSE

Aug 2022 - Present

GPA: 9.00
